

1) U-Lace works best on 3-piece construction sneakers.

2) Push tip thru eyelet; closed end first.

3) From inside the sneaker; pull the aglet thru.

4) Align aglet so open end (fingernail) points toward toe.

5) Pull the U-Lace tight and into place from outside.

6) Stretch to next eyelet; whichever you choose.

7) Insert as before.

8) Align aglet with open end (fingernail) pointing towards toe.

9) Take fingernails and lock them over the aglets of the segments below them.

**Note:** It is often easier to align aglets after the entire sneaker is laced and the sneaker is on the foot.

If your sneakers are looser than you like try a pattern that will stretch the U-Lace's more during the lace-up. This will yield a more snug-fit.

**WARNING:** 

**CHOKING HAZARD**-Small parts. Not for children under 3 years.
